ABOUT ME

I am a software developer with experience in JavaEE and Angular programming. With twelve years of professional experience in application development, I find it easy to adapt to new projects and quickly acquire new knowledge on new topics. I consider myself a dynamic, versatile, and autodidactic person, which makes me a very good team player. I enjoy sharing my experience as a developer and am therefore also able to take on the role of "Tech Leader", "Team Leader" or "Scrum Master".

WORK EXPERIENCE

 **Incony AG** – Paderborn, Germany

Software engineer

[01/10/2021 – 30/09/2026]

Description

- Incony is a leader in product management information systems (PIM).
- Incony provides its customers with its PIM software "Anteros" and its online store.
- The customers choose the applications they want and Incony customizes them for them, if needed.

Tasks

My main responsibility at Incony was to carry out the migration of the webshop. The webshop is an application that allows the customers to showcase their products and sell them to end customers. The old application was developed using JSF and the PrimeFaces library. The goal was to develop a new application using more modern technologies such as Angular, Vue, or React, as well as Spring Boot or OData in the backend.

To better manage the migration, I first had to work on further developing and improving the existing application. I then participated in various POCs (Proofs of Concept) aimed at improving the existing web catalog. Angular and Spring Boot were ultimately selected for this project.

I worked as a developer and team lead for the team tasked with developing the new application (using Angular and Spring Boot). I was also responsible for training the interns before they joined the development team.
